## Addition

| Addition- EYFS |  |  |  |
| :---: | :---: | :---: | :---: |
| Objectives | Concrete | Pictorial | Abstract |
| - Knows that a group of things change in quantity when something is added. <br> - Find the total number of items in two groups by counting all of them. <br> - Says the number that is one more than a given number. <br> - Finds one more from a group of up to five objects, then ten objects. <br> - In practical activities and discussion, beginning to use the vocabulary involved in adding. <br> - Using quantities and objects, they add two single digit numbers and count on to find the answer. <br> - Solve problems including doubling. | Use toys and general classroom resources for children to physically manipulate, group/regroup. <br> Use specific maths resources such as counters, snap cubes, Numicon etc. <br> Use visual supports such as ten frames, part part whole and addition mats, with the physical objects and resources that can be manipulated. | Two groups of pictures so children are able to count the total. <br> Bar model using visuals, pictures/icons or colours. <br> Use visual supports such as ten frames, part part whole and addition mats with pictures/icons. | A focus on symbols and numbers to form a calculation. <br> $5+2=7$ <br> 3 part part <br> * No expectation for children to be able to record a number sentence/addition calculation. |

| Addition- Year 1 |  |  |  |
| :---: | :---: | :---: | :---: |
| Objective | Concrete | Pictorial | Abstract |
| Number <br> bonds of 5, 6, <br> $7,8,9$ and 10 | Use cubes to add two numbers together as a group or in a bar. | Use pictures to add two numbers together as a group or in a bar. | $\begin{aligned} & 2+3=5 \\ & 3+2=5 \\ & 5=3+2 \\ & 5=2+3 \end{aligned}$ <br> Use the part-part-whole diagram as shown above to move into the abstract. |
| Counting | Start with the larger number on the bead string and then count on to the smaller number 1 by 1 to find the answer. | Use a number line to count on in ones. | $5+3=8$ |

| Addition- Year 2 |  |  |  |
| :---: | :---: | :---: | :---: |
| Adding 3 single digit numbers | $4+7+6=17$ <br> Put 4 and 6 together to make 10. Add on 7. <br> Following on from making 10, make 10 with 2 of the digits (if possible) then add on the third digit. | Add together three groups of objects. Draw a picture to recombine the groups to make 10. | $\begin{aligned} \frac{4+7+6}{10} & =10+7 \\ & =17 \end{aligned}$ <br> Combine the two numbers that make 10 and then add on the remainder. |

| Objective | Concrete | Pictorial | Abstract |
| :---: | :---: | :---: | :---: |
| Column <br> method <br> without <br> regrouping | Add together the ones first, then add the tens. Use the Base 10 blocks first before moving onto place value counters. $24+15=$ $44+15=$ | After physically using the base 10 blocks and place value counters, children can draw the counters to help them to solve additions. | $\begin{aligned} & 24+15=39 \\ & 24 \\ & +15 \\ & \hline 39 \end{aligned}$ |
| Column method with regrouping | Make both numbers on a place value grid. <br> Add up the units and exchange 10 ones for 1 ten. | Using place value counters, children can draw the counters to help them to solve additions. | $\begin{aligned} & 40+9 \\ & \frac{20+3}{60+12=72} \end{aligned}$ |

Subtraction

|  |
| :--- | :--- | :--- |
|  |
| Objectives |
| Knows that a group of |
| when something is taken |
| away |

| Subtraction- Year 1 |  |  |  |
| :---: | :---: | :---: | :---: |
| Objective | Concrete | Pictorial | Abstract |
| Taking away ones | Use physical objects, counters, cubes etc. to show how objects can be taken away. | Cross out drawn objects to show what has been taken away. | $4-2=2$ |
| Counting back | Make the larger number in your subtraction. Move the beads along your bead string as you count backwards in ones. $13-4=9$ | Count back on a number line or number track <br> Start at the bigger number and count back the smaller number, showing the jumps on the number line. | Put 13 in your head, count back 4 . What number are you at? <br> Use your fingers to help. |
| Find the difference | Compare amounts and objects to find the difference. <br> Use cubes to build towers or make bars to find the difference. Use basic bar models with items to find the difference. | Count on to find the difference. <br> Lisa is 13 years old. Her sister is 22 years old. Find the difference in age between them. <br> Draw bars to find the difference between 2 numbers. | Hannah has 8 goldfish. <br> Helen has 3 goldfish. <br> Find the difference between the number of goldfish the girls have. |

| Subtraction- Year 2 |  |  |  |
| :---: | :---: | :---: | :---: |
| Objective | Concrete | Pictorial | Abstract |
| Column method without regrouping | $75-42=33$  <br> Use Base 10 to make the bigger number then take the smaller number away. <br> Show how you partition numbers to subtract. <br> Again make the larger number first. |  <br> Draw the Base 10 or place value counters alongside the written calculation to help to show working. | $\begin{gathered} 47-24=23 \\ -\frac{40+7}{20+4} \\ \hline 20+3 \\ \hline \end{gathered}$ <br> This will lead to a clear written column subtraction. |

Multiplication

| Multiplication - EYFS |  |  |  |
| :---: | :---: | :---: | :---: |
| Objectives | Concrete | Pictorial | Abstract |
| - Solve problems including doubling | Counting and other maths resources for children to make 2 equal groups. <br> Physical and real life examples that encourage children to see concept of doubling as adding two equal groups. | Pictures and icons that encourage children to see concept of doubling as adding two equal groups. | $1+1=$ $7+7=$ <br> $2+2=$ $8+8=$ <br> $3+3=$ $9+9=$ <br> $4+4=$ $10+10=$ <br> $5+5=$ $11+11=$ <br> $6+6=$ $12+12=$ <br> Addition calculations to model adding two equal groups. |

| Multiplication－Year 1 and 2 |  |  |  |
| :---: | :---: | :---: | :---: |
| Objective | Concrete | Pictorial | Abstract |
| Repeated addition | $3+3+3$ <br> Use different objects to add equal groups． | There are 3 plates．Each plate has 2 star biscuits on．How many biscuits are there？ | Write addition sentences to describe objects and pictures． $2+2+2=6$ |
| Arrays－ showing commutative multiplication | Create arrays using counters／cubes to show multiplication sentences． | Draw arrays in different rotations to find commutative multiplication sentences． <br> Link arrays to area of rectangles． | Use an array to write multiplication sentences and reinforce repeated addition． $\begin{aligned} & 5+5+5=15 \\ & 3+3+3+3+3=15 \\ & 5 \times 3=15 \\ & 3 \times 5=15 \end{aligned}$ |

# Division 

## Division - EYFS

| Objectives | Concrete | Pictorial | Abstract |
| :---: | :---: | :---: | :---: |
| Solve problems including halving and sharing. <br> Halving a whole, halving a quantity of objects. <br> Sharing a quantity of objects. | Children have the opportunity to physically cut objects, food or shapes in half. <br> Counting and other maths resources for children to share into two equal groups. <br> Use visual supports such as halving mats and part part whole, with the physical objects and resources that can be manipulated. <br> Counting and other maths resources for children to explore sharing between 3 or more. | Pictures and icons that encourage children to see concept of halving in relation to subitising, addition and subtraction knowledge. i.e. Knowing 4 is made of 2 groups of 2 , so half of 4 is 2 . <br> Bar model with pictures or icons to support understanding of finding 2 equal parts of a number, to further understand how two halves make a whole. <br> Pictures for children to create and visualise 3 or more equal groups. |  |

| Division Year 1 and 2 |  |  |  |
| :---: | :---: | :---: | :---: |
| Objective | Concrete | Pictorial | Abstract |
| Sharing | I have 8 cubes, can you share them equally between two people? | Children use pictures or shapes to share quantities. | Share 8 buns between two people. $8 \div 2=4$ |
| Grouping | Divide quantities into equal groups. Use cubes, counters, objects or place value counters to aid understanding. | Use a number line to show jumps in groups. The number of jumps equals the number of groups. <br> Think of the bar as a whole. Split it into the number of groups you are dividing by and work out how many would be within each group. <br> 10 $\begin{aligned} & 10 \div 5=? \\ & 5 \times ?=10 \end{aligned}$ | $10 \div 5=2$ <br> Divide 10 into 5 groups. How many are in each group? |
